ASICRM End-to-End Pictorial Workflow

Comprehensive visual blueprint of Customer onboarding, Enquiry processing, Quotation formulation, Inward procurement with Highest-Price indexing, and Outward delivery with serial dispatch.

1. Customer Management & Onboarding Flow (Dedicated)

How prospective clients are onboarded, verified, deduplicated, and mapped to multiple branches/sites.

1. Capture Lead / Prospect

01

Enter Company / Client Name, Primary Contact Person, 10-Digit Mobile, and Email address.

Direct Entry | Enquiry Form

→

2. Duplicate Verification

02

System automatically scans records by mobile (last 10 digits), normalized email, and fuzzy name.

Zero Duplication | Auto-Match

→

3. Master Profile & GSTIN

03

Assign unique ID (e.g. `CUST-00012`). Record GSTIN (15-digit), Billing Address, and Shipping Sites.

GST Registered | Multi-Site

↓

4. Linked Commercial Ledger

04

Customer Profile serves as a single 360° hub aggregating: Linked Enquiries, Quotations, Delivery Challans, Tax Invoices, and Outstanding Payments.

360° View | Ledger History | Lifetime Value

2. Enquiry Intake & Technical Sizing Flow (Dedicated)

How customer project requirements (CCTV, networking, bio-metric, installation) transition from lead to formal quotation.

1. Log Enquiry

01

Generate `ENQ-000187`. Select customer, enquiry source, expected closing date, and target budget.

Status: OPEN | Sales Assign

→

2. Bill of Materials (BOM)

02

Engineer lists required hardware products (Cameras, NVR, PoE Switches, Cables) & installation services.

Hardware Items

Service Charges

→

3. Forward to Quotation

03

Single-click forward creates formal Quotation with live inventory pricing and tax calculations.

Create Quote | Linked Ref

Pro Tip: An Enquiry can generate multiple versioned Quotations (e.g. `QT-000135` with 4MP cameras vs `QT-000136` with 5MP cameras) while keeping the original enquiry history intact!

3. Quotation Formulation, Brand Display & Approval Flow

Automated quotation generation with dynamic brand labeling, installation charging, and conversion.

1. Product & Brand Labeling 01

System enforces explicit format: `1x Dahua 5MP Bullet Camera - Dahua`. Prevents confusing duplicate suffixes while guaranteeing brand visibility.

Item - Brand Format

2. Services & GST Tax 02

Adds Installation, Testing & Commissioning without false brand tags. Automatically computes CGST/SGST (intra-state) or IGST (inter-state).

Installation Charges | 18% GST

3. Document PDF & Share 03

Generates crisp, branded PDF with company header, bank accounts, terms, and binding margins. Status: `PENDING`.

Instant PDF | Pending Approval

4. Customer Decision: Acceptance & Order Conversion 04

- If **ACCEPTED**: One-click converts into **Sales Order (ORD)** or **Proforma Invoice (PI)**.
- If **REJECTED**: Moves to Rejected tab with reason; retains quote for pricing reference.

Converted to Order | Proforma for Advance

4. Inward Procurement, GRN & Highest-Cost Valuation Flow

Supplier purchase orders, goods receiving, serial barcode onboarding, and automatic price inflation safeguard.

1. Create PO (Draft) 01

Select Supplier, ordered quantities, unit cost, delivery date. Shows in Draft tab (editable / deletable).

Status: DRAFT

2. Send to Vendor 02

Locks PO lines; generates official vendor Purchase Order document with delivery terms.

Status: SENT | Awaiting Delivery

3. Goods Receipt (GRN) 03

Store officer opens **Receive Goods** window. Enters arrived qty and scans/types serial numbers.

GRN Created | Serials Inward

4. Automatic Stock Inward & Highest Purchase Price Valuation 04

- **Warehouse Units**: Incremented in physical inventory with serial pool registration.
- **Stock Movement Log**: Records inward entry with the *exact purchase rate* paid to vendor.
- **Highest Cost Safeguard**: Compares inward price with master catalog. If higher (e.g. ₹4,500 vs ₹4,000), catalog purchase price updates to ₹4,500 to protect future quotation profit margins!

Stock Balance ++ | Exact Movement Amount | Highest Price Safeguard

5. Delivery Challan (DC) & Serialized Hardware Dispatch Flow

Stock reservation, serial barcode selection, dispatch note generation, and return handling.

1. Generate DC — 01

Initiate from Order or directly. Select destination Customer site, dispatch warehouse, and transporter / E-Way details.

DC Initiation

2. Serial Selection — 02

System displays live warehouse serial numbers. Officer picks specific serials (e.g. `SN-DH-9081`) for physical dispatch.

Serial Tracking | Cables Excluded

3. Challan Nature — 03

Non-Returnable: Direct customer sale.
Returnable: For demo, testing, rental, or repair replacement.

Sales Outward | Demo / Return

4A. Non-Returnable Sale Execution — 04

- Stock permanently deducted from warehouse.
- Dispatched serials marked SOLD to customer.
- Stock movement ledger logs `OUTWARD` with linked DC.
- Triggers final **GST Tax Invoice** generation.

Final Dispatch | Tax Invoice Next

4B. Returnable DC Tracking & Inward Return — 04

- Stock marked as *On Loan / In Field*.
- When customer returns items, Store Officer accesses **DC Return** window.
- Restores inventory count and returns serial numbers to available stock.

Inward Return | Stock Restored

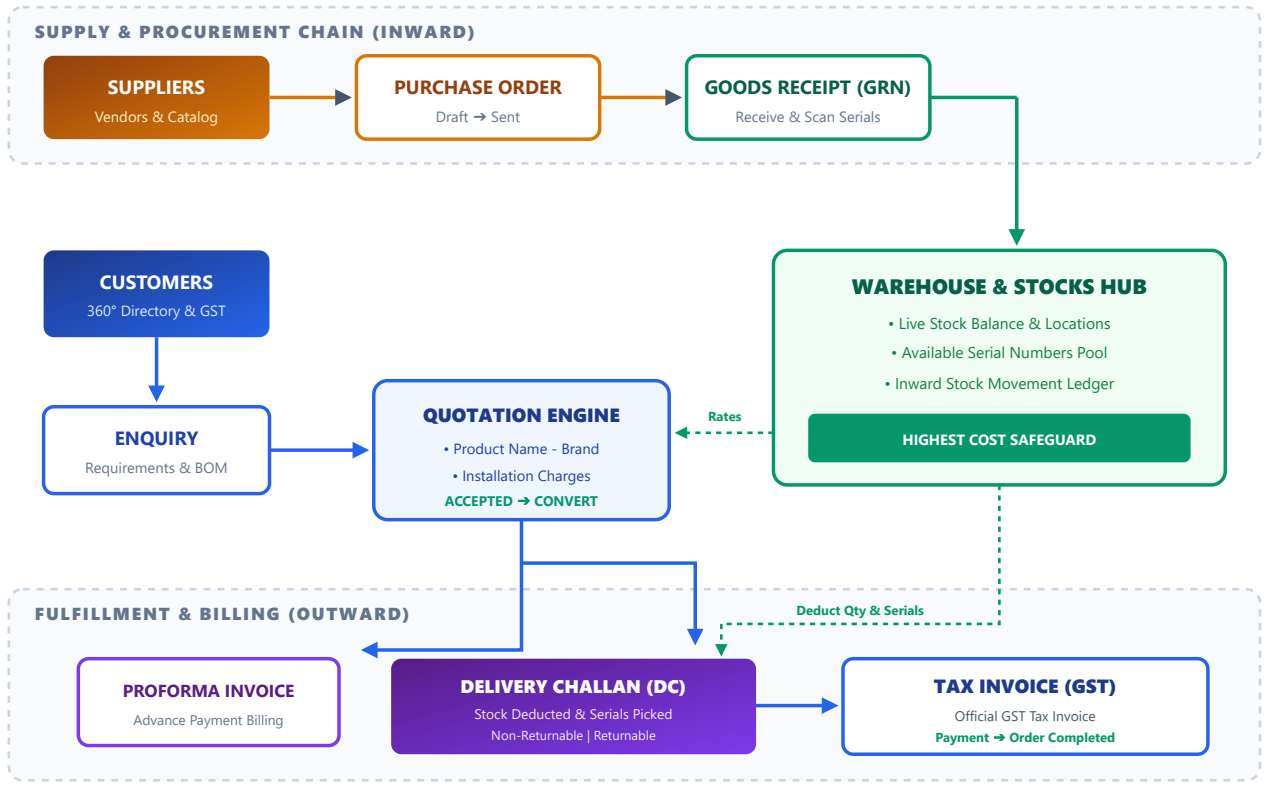

6. Invoicing, Payments & Revenue Reconciliation Flow

From Delivery Challan to Tax Invoice, payment tracking, and customer balance settlement.

Document Stage	Reference ID	Trigger Condition	Stock Impact	Accounting Impact
Proforma Invoice	`PI-000042`	Quotation accepted; advance requested	None (Draft reservation)	Informational (No GST liability)
Delivery Challan	`DC-000089`	Goods leave warehouse for client site	Immediate Deduction & Serials Linked	Goods in transit / Outward note
GST Tax Invoice	`INV-000104`	DC delivery confirmed or direct billing	Already accounted via DC	Final GST liability & Debtor balance
Payment Receipt	`PAY-000078`	Cheque / NEFT / RTGS / Cash received	None	Reduces customer outstanding balance

7. The Grand Interconnected Architecture: All Modules in One Seamless Loop

Visual schematic illustrating how Suppliers, Inward Procurement, Warehouses, Enquiries, Quotations, Dispatches, and Invoices connect.

Summary of Interconnection: The Supplier PO feeds the Warehouse through GRN inspection $ ightarrow$ The Warehouse feeds the Quotations and Delivery Challans with exact serials and Highest-Cost safeguards $ ightarrow$ The Customer Enquiry converts into Quotations, then DC Dispatch, and finally the GST Tax Invoice. Every transition is tied back to the central audit ledger!
